

Phase 2 – Week 1 – Day 2 Home Assignment

Build a Document Question Answering (Document QA) Agent

Develop an AI-powered Document QA agent that enables users to upload a document from their local system and ask questions based on its content. The agent should extract the document content, understand the user's query, and provide accurate answers using only the uploaded document as the source of information. If the requested information is not available in the document, the agent should respond appropriately instead of generating unsupported answers.

Expected Outcome: Users should be able to upload a document, ask multiple questions, and receive context-aware answers derived only from the uploaded document.

list of nodes :

1. Manual Trigger
2. Read /write files from disk
3. Extract from file
4. Basic LLM chain

The screenshot displays the n8n workflow editor interface. The workflow, titled 'My workflow 4', consists of the following nodes:

- When clicking 'Execute workflow'**: A manual trigger node.
- Read/Write Files from Disk**: A node to read files from the local disk.
- Extract from File**: A node to extract content from a PDF file.
- Basic LLM Chain**: A node that uses the Groq Chat Model to process the extracted document content and user queries.

The workflow is executed successfully, as indicated by the 'Logs' section. The output of the 'Basic LLM Chain' node is displayed in the 'OUTPUT' section:
